## Reflect-A-Lite: Clear Reflective Paint

Reflect-A-Lite is an industrial clear coating aerosol paint. It directly reflects flashlights or headlights making items extraordinarily visible in the dark. It is a clear aerosol reflective coating that uses a glass sphere technology and can be applied to virtually any item without obscuring its original color.

Reflect-A-Lite coating can be applied to rough and complex shapes not suitable for reflective films. It employs a special high delivery valve to optimize application.

- Improve low-light visibility without changing daylight color
- Increase visibility of critical safety items
- Call out and label underground utilities

Available individually or case lots.

Uses: Fire extinguishers, fire hydrants, safety stations, first aid kits, door jambs, stair risers, conduits, pipelines, utilities, and passageways in sewers, underground facilities and mine shafts.
